

SHREYAS CHANDOLKAR

Robotics Software Engineer

+91 914-552-7174 sschandolkar@example.com ShreyasChandolkar Pune, Maharashtra

SUMMARY

Engineer with a hands-on experience in building 0-to-1 at FlytBase, a global category leader in drone autonomy platforms. Contributed to a high-performance team driving the platform's scale from 50 to 500+ concurrent drone docking stations. Involved end-to-end from gathering customer requirements and technical validation to design, testing, and deployment while establishing robust engineering standards and processes that significantly boosted team efficiency.

EXPERIENCE

Robotics Engineer

FlytBase Labs Pvt Ltd

02/2024 - Present Pune

A global category leader in drone autonomy platforms

- Re-architected flight operations from a monolithic system to microservices, scaling DJI device support from 50 to 500 concurrent devices
- Deployed a state management service using RMQ, MQTT, and a leader-follower pattern, reducing flight operations downtime from 50% to zero
- Optimized drone manual control latency, reducing it from 1000ms to 20ms by deploying regional MQTT brokers, achieving a 50x performance improvement
- Integrated third-party payloads support (e.g., speakers, searchlights, alarms, parachutes) using an adapter design pattern, enabling scalability for future enhancements
- Led proof of concept and testing for 4G dongle integration to resolve RF interference in DJI docks, while developing 4G Mobile SDK support within the Flytbase APK for enhanced connectivity.
- Built a YOLOv8-based object detection pipeline with Agora IoT SDK, achieving 88% accuracy and 100ms latency for real-time performance
- Led end-to-end testing and deployment of DJI Docking Station 3 support on FlytBase platform, collaborating with channel partners to ensure successful integration
- Contributed to a 24/7 incident response team, successfully mitigating critical flight operation disruptions, restoring customer trust, and stabilizing services within a month.

Software Engineer Intern

Cloudanix Labs Pvt Ltd

12/2023 - 02/2024 USA (remote)

A multi-surface attack management platform across Code, CI/ CD, and Cloud

- Implemented GitHub, Bitbucket, and GitLab plugins for code secret and code vulnerability scanning
- Developed automated workflows for Google Cloud Build service

EDUCATION

Bachelor of Engineering (B.E.) in Electronics and Telecommunication 9.1/10

Pune Institute of Computer Technology

08/2020 - 05/2024 Pune, Maharashtra

XII(HSC) 85.23%

Sir Parshurambhau college

06/2018 - 05/2020 Pune, Maharashtra

X(SSC) 95.4%

Sardar Dastur Hoshang Boy's High School

06/2012 - 05/2018 Pune, Maharashtra

KEY ACHIEVEMENTS

Smart India Hackathon 2023 Winner

Winner of the Smart India Hackathon 2023, demonstrating innovative problem-solving abilities

DD Robocon 2023

Achieved **All India Rank 15** reinforcing consistent performance and technical capabilities

DD Robocon 2022

Achieved **All India Rank 6** in showcasing strong teamwork and engineering skills

SKILLS

C/C++	Python	Bash	Go	Kotlin
Typescript	Dynatrace	Elasticsearch		
Docker	Kubernetes	Angular	React	
Grafana	MongoDB	AWS	Git	
RabbitMQ	Redis	MQTT	Relevance AI	
N8N	Linux	Robotics	IoT	

PROJECTS

DVBS2 Analyser

12/2023 - 12/2023

DVBS2 Analyser project

- Analyzed packetized and continuous streams using TS and GSE protocols to retrieve multiplexed media and IP payloads
- Built a real-time dashboard supporting raw input in various formats, with live capture from network interfaces
- Designed a user-friendly UI to display decoded stream data in a readable and interactive format

Decentralized mapping and navigation for SWARM robots

08/2023 - 01/2024

Decentralized mapping and navigation for SWARM robots project

- Designed and implemented a swarm of mobile robots using the ESP32-S3 as the primary compute platform.
- These robots operate autonomously, mapping unknown environments with ESP-Now as the communication protocol
- Developed custom libraries and a Hardware Abstraction Layer (HAL) for sensors such as MPU6050 and VL530x
